Social Workers • Other Donation and
Transplantation Professionals

Increased Donation Rates Through Utilization of Critical Care TeleHealth

The largest health system in Utah has identified a need for improved collaboration in maximizing donor referrals, evaluation, and communication. Through a collaborative effort, an electronic referral interface was built and launched to address that need. Tele Critical Care took a lead role in supporting the donor referral and communication process, resulting in improved relationships and increased donor volume. Join us to learn more about the successes and challenges experienced leading up to its launch!

At the end of the webinar, participants should be able to:

- **Develop relationships with Tele Critical Care units to increase engagement and improve the donation evaluation process and pre-donor management.**
- **Facilitate integration of electronic donor referral systems to improve the notification process, reduce missed donor evaluations, and improve nursing staff job satisfaction.**
