## Making the Impossible Possible: The Road to The First-In-Human Kidney Xenotransplant Clinical Trial

Xenotransplantation aims to increase availability through the novel approach of transplanting, implanting, or infusing live cells, tissues, organs from a nonhuman animal source, however, there are many clinical and ethical considerations that must be examined as we look towards the future. Over the course of this discussion, we will focus on the process of Xenotransplantation from bench to bedside. We'll be joined by Dr. Dr. Jayme Locke, UAB Medicine's Comprehensive Transplant Institute Director and an integral team member in developing and implementing the Parsons' Model, to learn more about the journey to xenotransplantation.

### At the end of the webinar, participants should be able to:

- Explain the development and implementation process of the Parsons' Model
- Discuss operationalizing xenotransplantation from bench to bedside.
